

DIVING...
SNORKELLING

Mask

Is a great way to see the marine environment.

AS A SNORKELLOR:
You can dive in shallow lagoons, rock pools, marine reserves, close to shore, with seals -dolphins and feed fish.

ALL YOU NEED ARE:

- A mask - to see with.
- A snorkel - to breath through.
- A pair of fins - to swim with.
- A wet suit - to keep warm.

- Make sure it fits your face and is water tight.
- You need to be able to pinch your nose.
- Has it got safety glass?

Snorkel

THE SNORKEL

Helps us to breath on the surface and look below.

* "J" SHAPE IS BEST (Simple)

* NOT TOO LONG OR TOO WIDE (nothing worse than a wide bore!)

* PURGE VALVES ARE OK BUT KEEP SAND OUT OF THEM

Fins

Help you to swim through the water efficiently.

They should:

- Fit comfortably.
- Not be too big.
- Not be too stiff.

Types of fins:

Closed heel fin. Open heel fin. High heel fin...???

Wet Suit

Help keep us warm in the water.

They should:

- Fit snugly.
- Be suitable for diving.
- Preferably cover your head.

HEALTHY NOTE: IT'S NOT NICE TO WEE IN YOUR SUIT.
